

JOSHUA TAZEEM

Software Architect | Full-Stack System Design | SaaS & Platform Engineering

+92 303 5300569 • joshuatazeem@yahoo.com • linkedin.com/in/joshua-tazeem-4a147b239 • github.com/joshuatazeem2022skipq
• Faisalabad, Pakistan

Summary

Full-Stack Software Architect who designs and scales production web and mobile platforms end to end. Focused on event-driven microservices, real-time systems, and practical AI/LLM integration, including a RAG-powered chatbot built into an industrial automation platform. Known for keeping systems reliable in production, speeding up deployment pipelines, and guiding teams through architecture reviews and hands-on mentorship.

Experience

Visibility Bots

Software Architect – Platform Engineering

01/2025 - Present

- Architected event-driven Node.js microservices with OpenRemote for device telemetry ingestion and Redis pub/sub for inter-service communication, achieving 99.7% uptime.
- Engineered write/read separation pattern scaling ingestion services independently from query services, eliminating bottlenecks in real-time dashboard synchronization via WebSocket
- Designed cross-platform React component library with platform-agnostic business logic layer, consumed by web dashboard and React Native mobile app.
- Integrated an AI chatbot with Retrieval-Augmented Generation (RAG) into an industrial automation platform, enabling users to interact with application/domain knowledge through an LLM-powered interface.

Autobots

Software Engineer – Full-Stack Architecture

03/2023 - 12/2024

- Led a Next.js migration using SSR for personalized dashboards, SSG for marketing pages and API routes for backend functionality.
- Decomposed a monolithic application into bounded microservices behind an API gateway for routing and authentication, with Redis caching and PostgreSQL read replicas.
- Architected infrastructure-as-code deployment: Docker containerization with blue-green deployments and automated health-check rollback, achieved 99.5% availability SLA and reduced deployment time from 45 to 8 minutes

TZL Dynamics

Software Engineer – Technical Leadership

02/2023 - 07/2024

(Remote, evening shift)

- Optimized full-stack performance: backend connection pooling with prepared statements, frontend React Window virtualization with progressive image loading, multi-layer caching (database, API, CDN).
- Established technical leadership: led Agile ceremonies, conducted architectural reviews, mentored 2 junior engineers on full-stack patterns.

AikSol

Associate Software Engineer (Frontend)

07/2021 - 02/2023

Software development company offering innovative solutions

- Architected full-stack enterprise applications: Node.js/Express API with JWT and RBAC, React TypeScript component library with adapter pattern for third-party integrations, reduced development time by 30% across CRM and e-commerce platforms
- Optimized MongoDB data layer with aggregation pipelines, strategic indexing, and schema normalization patterns, improved dashboard query performance by 70% (5s → 1.5s) while maintaining data consistency

Skills

Frontend: Next.js • React • React Native • TypeScript • Redux Toolkit • Three.js

Backend: Node.js • Express • REST APIs • API Gateway • WebSockets

AI/LLM: AI Chatbots • LLM API Integration • Retrieval-Augmented Generation (RAG) • AI-powered Application Features

Data & Infrastructure: Mongoose • PostgreSQL • Redis • GraphQL • CI/CD • Caching • CDN

Platform & Integrations: JWT • RBAC • CRM Integrations • Payment Gateways (Stripe and Paypal) • Third-Party APIs

Engineering: Debugging • Testing • Performance Optimization • Scalability • Agile

Education

National University of Computer and Emerging Sciences (NUCES-FAST)

Islamabad, Pakistan

Bachelor of Science in Electrical Engineering, (Computer Engineering)

08/2018 - 11/2022
